David Legates' climate change papers On this site, I have a series of papers showing the changes in the extent of global warming at the global level (along with their effects on temperature, rainfall, precipitation, ocean/aerosol temperature, etc.). These studies provide a detailed picture of the extent of warming over the past century. You usually find them in the Global Warming section, on top of my global temperature study. So click on the link that brings you to the relevant section. For a nice overview with all the links provided (and even with the ones not listed in the table), see my global temperature research paper. The papers above may also be found in My papers on Global temperatures and surface temperature. The tables of temperature and surface temperatures will help you to better understand how the various papers relate. The table with each paper was found here. The global temperature study with paper 1 is also on this site (as is the one for paper 2 and so on). The study for paper 1 is also here. Here is this paper, together with other papers from this period.. Aesop G. 1961. Ocean temperature and precipitation. Quarterly Journal of the Royal Meteorological Society,.. Gilles-Eliasson G. 1998. The heat flow model of the oceans. Geophysical Research Letters, 34(9), 2625-2634. A great summary of most studies of the temperature of the oceans:..
